Overview. The most basic type of integral equation is called a Fredholm equation of the first type, $\phi(x) = f(x) + \lambda \int_a^b K(x, y)\phi(y) dy$. The notation follows Arfken. Here ϕ is an unknown function, f is a known function, and K is another known function of two variables, often called the kernel function.

Integral equation - Wikipedia

Legendre polynomials are also useful in expanding functions of the form $f(\cos\theta)$ (this is the same as before, written a little differently): $f(\cos\theta) = \sum_{l=0}^{\infty} a_l P_l(\cos\theta)$, which arise naturally in multipole expansions.

Legendre polynomials - Wikipedia

This book is great for learning the topic for the first time, and even better once you're looking for a good reference at a later time. It goes very deeply into the physics and philosophy of classical mechanics.
